

eFinMoney — QA Test Planning Guide

Product	eFinMoney (https://www.efin.money)
Document purpose	Enable QA to design end-to-end and regression test cases
Audience	QA leads, test engineers, product UAT
Version	1.0 — July 2026
Source of truth for flags	<code>src/lib/productFeatures.ts</code>
App stack	Vite + React + TypeScript + Supabase (Auth, DB, Edge Functions)

1. Product overview

eFinMoney is a multi-currency consumer fintech wallet for cross-border money movement, focused on Africa ↔ Western corridors (Canada, USD/EUR/GBP).

Users can:

1. Create and hold **multi-currency fiat wallets**
2. **Top up** wallets via several payment providers (shown under white-label method names)
3. **Send** money to bank accounts or mobile money (MoMo) beneficiaries
4. **Exchange** between fiat currencies
5. Manage **contacts/payees**
6. Optionally use **virtual cards**, **bill pay**, and **airtime** (when enabled)
7. Complete **KYC / identity verification** before full access

Internal payment providers (Nomba, Fincra, Paytota, Elicate, Swychr, Ghana Pay, Flutterwave, etc.) must **not** appear by brand name in customer top-up UI. Testers must assert the **user-facing labels** listed in §3.

2. Environments & access

Item	Notes for QA
Production web	<code>https://www.efin.money</code>
Local / staging	Local Vite (<code>npm run dev</code>); Supabase project as configured in <code>.env</code>
Auth	Email/password (Supabase Auth); PIN reset flows exist
KYC gate	Most app shell routes require KYC progress via Persona
Admin	Separate <code>/admin/*</code> routes with staff roles
Feature flags	Client: <code>VITE_FEATURE_*</code> in env. Defaults in <code>productFeatures.ts</code>
Backend secrets	Edge Function secrets (not visible to QA UI) — PSP keys, webhooks

Test accounts needed

- Unverified user (pre-KYC)
- KYC-approved user with funded wallets (NGN, GHS, ZMW, USD, CAD, etc.)
- Staff/admin (KYC review, API management)
- Beneficiaries: Nigeria bank, Ghana MoMo, Zambia MoMo, Canada Interac/EFT (directory only if Canada send gated)

3. White-label payment method map (critical for UI assertions)

Internal rail	User-facing label	Typical use
Nomba	Express card	NGN top-up; USD/EUR/GBP; CAD charged as USD then credited CAD
Fincra checkout	Card or bank transfer	USD/EUR/GBP; CAD via USD charge
Paytota	Pay by invoice	USD, EUR, GBP, CAD invoice collection
Fincra Interac	Interac e-Transfer	CAD only (feature flag usually off)
Ghana Pay	Mobile money / Ghana MoMo	GHS
Elicate	Mobile Money	ZMW (MTN / Airtel / Zamtel)
Swychr	Mobile money	XAF, KES, XOF, UGX top-up; also cards & airtime

Fail any case where customer UI shows Nomba, Fincra, Paytota, Elicate, Swychr, Flutterwave brand names on top-up/send choosers (admin/API screens may still show PSP names).

4. Feature flags (defaults — July 2026)

Override with `VITE_FEATURE_<NAME>=true|false` .

Flag key	Env var	Default	What QA sees when ON	When OFF
nombaNigeria	VITE_FEATURE_NOMBA_NIGERIA	true	NGN Express card; NGN send	Hide Nomba NGN
ghanaPay	VITE_FEATURE_GHANA_PAY	true	GHS MoMo top-up/send	Hide Ghana
elicate	VITE_FEATURE_ELICATE	true	ZMW MoMo top-up/send/receive links	Hide Zambia Elicate
paytota	VITE_FEATURE_PAYTOTA	true	Pay by invoice on USD/EUR/GBP/CAD	Hide invoice option
paytotaPayout	VITE_FEATURE_PAYTOTA_PAYOUT	true	UGX MoMo payout toggle on Send	Hide toggle
finfra	VITE_FEATURE_FINCRA	true	Card or bank transfer top-up	Hide Finfra checkout
finfraInterac	VITE_FEATURE_FINCRA_INTERAC	false	CAD Interac e-Transfer top-up	"Not available" / hidden
swychr	VITE_FEATURE_SWYCHR	true	Swychr MoMo top-up, cards panel, airtime	Hide Swychr surfaces
plaid	VITE_FEATURE_PLAID	true	Bank link on send funding	Hide Plaid
billPay	VITE_FEATURE_BILL_PAY	true	/pay-bills	Coming Soon
cards	VITE_FEATURE_CARDS	true	/cards route	Coming Soon
canadaDomestic	VITE_FEATURE_CANADA_DOMESTIC	false	/transfers/canada live	Coming Soon
paymentLinks	VITE_FEATURE_PAYMENT_LINKS	false	Escrow /payment-links, /claim	Coming Soon
flutterwave	VITE_FEATURE_FLUTTERWAVE	false	FLW top-up UI	Hidden
otherAfricanCorridors	VITE_FEATURE_OTHER_AFRICA	false	KES/UGX/TZS/RWF as live send	Not live send
crypto	VITE_FEATURE_CRYPTO	false	Crypto exchange / CPN send	Coming Soon
stripe	(hardcoded)	false	Stripe Connect / African card	Always gated
adyen	VITE_FEATURE_ADYEN	false	Adyen	Hidden

Live top-up currencies (when flags default): NGN, USD, EUR, GBP, CAD, XAF, KES, XOF, UGX, GHS, ZMW.

Live send corridors (when flags default): **Nigeria (NG), Ghana (GH), Zambia (ZM)** only.

5. Application map (routes)

5.1 Public / marketing

Path	Purpose	Suggested test focus
/	Landing	Load, CTA to auth
/features , /how-it-works , /about , /contact	Marketing	Links, forms
/privacy , /terms , /compliance	Legal	Content loads
/auth , /auth/confirm , /auth/reset-password	Auth	Sign up, login, email confirm, password reset
/reset-pin	PIN reset	Request + confirm
/s/:code	Short link	Resolve valid/invalid code
/claim/:code	Claim escrow link	Gated by paymentLinks
/deposit/complete , /payment-callback	PSP return	Wallet credit after top-up
/callback , /interac/callback	Interac OAuth	Only if Interac flows enabled

5.2 Authenticated customer app

Path	Purpose	Gate
/dashboard	Home balances / actions	KYC shell
/wallets	List/create wallets	—
/wallets/:walletId/statement	Statement	—
/wallet/topup	Fund wallet	—
/wallet/receive	Receive money / VAs / ZMW links	—
/send	Cross-border send	—
/send/cpn	Crypto send	crypto
/send/african-card	African card send	stripe
/exchange	FX	—
/transfers , /transfers/:id	History / tracking	—
/transactions/:journalId	Ledger detail	—
/contacts , /payees	Beneficiaries	—
/cards , /cards/efin/:id	Cards	cards
/pay-bills , /pay-bills/canada	Bills	billPay
/payment-links	Escrow links	paymentLinks
/transfers/canada	Canada domestic	canadaDomestic
/more , /profile , /security , /support	Settings hub	—
/kyc , onboarding /onboarding/*	Identity	—

5.3 Admin / ops

Area	Paths (examples)	Test themes
Access	/admin/login , /admin/dashboard	Role-based login
Users / staff	/admin/users , /admin/staff , /admin/onboarding	CRUD, invites
KYC	/admin/kyc , /admin/kyc/:id	Approve/reject; Sumsb EDD
Finance	/admin/finance , /admin/revenue , /admin/pricing	Balances, pricing
Compliance	AML, sanctions, STR, LCTR, EFTR, CDD, EDD, etc.	Workflows & forms
Ops	/admin/operations , incidents, reconciliation	Ops queues
API probes	/admin/api	Integration health (may show PSP names)

6. Core user journeys (for test-case design)

6.1 Registration → KYC → dashboard

Step	Expected
1. Sign up	Account created; email confirm if required
2. Login	Session established
3. Onboarding / KYC	Persona inquiry starts (/onboarding/identity or /kyc)
4. Pending / approved / rejected	Correct routing to welcome, app, or rejected
5. Dashboard	Wallets and primary CTAs visible when approved

Negative: Incomplete KYC cannot fully use send/top-up as designed by KYCGuard .

6.2 Create wallet

Step	Expected
Open /wallets → Create	Modal lists popular currencies (e.g. NGN, USD, CAD, KES, GBP, EUR, GHS, UGX, TZS, ZMW)
Create NGN + CAD + ZMW	Three wallets appear with zero or correct balance
Duplicate currency	Blocked or no duplicate

6.3 Top-up — by currency

Testers should open /wallet/topup , select wallet currency, and verify **method picker** matches flags.

A. NGN — Express card (Nomba)

ID	Case	Expected
TU-NGN-01	Select NGN wallet	Express card method available
TU-NGN-02	Enter amount → Continue	Redirect or card flow; no “Nomba” brand in customer UI
TU-NGN-03	Successful payment return	Wallet balance increases; transfer/tx history entry
TU-NGN-04	Cancel / fail	No credit; clear error

B. GHS — Ghana Mobile Money

ID	Case	Expected
TU-GHS-01	Select GHS	Ghana MoMo networks (MTN / AirtelTigo / Telecel)
TU-GHS-02	Valid phone + amount	Collection initiated; OTP/USSD as provider requires
TU-GHS-03	Success webhook	GHS wallet credited

C. ZMW — Mobile Money (Elicate)

ID	Case	Expected
TU-ZMW-01	Select ZMW	Mobile Money; networks MTN / Airtel / Zamtel
TU-ZMW-02	OTP / approval flow	Charge completes
TU-ZMW-03	Success	ZMW balance credit

D. USD / EUR / GBP — multi-rail picker

ID	Case	Expected
TU-FX-01	Select USD (flags default)	Options include Express card , Card or bank transfer , Pay by invoice (as enabled)
TU-FX-02	Express card path	Completes and credits wallet
TU-FX-03	Card or bank transfer	Hosted checkout; EUR/GBP may offer bank_transfer; USD is card-only on Fincra
TU-FX-04	Pay by invoice	Invoice issued; credit on payment
TU-FX-05	White-label	No PSP brand names on chooser

E. CAD — multi-rail (important)

ID	Case	Expected
TU-CAD-01	Select CAD	Method picker: Express card, Card or bank transfer, Pay by invoice; Interac only if <code>fincraInterac</code>
TU-CAD-02	Express card / Fincra card	Charge currency is USD; credit currency is CAD (quote UI should explain conversion)
TU-CAD-03	Interac when flag off	Not offered or “coming soon”
TU-CAD-04	Interac when flag on	Interac e-Transfer instructions; credit on match
TU-CAD-05	Merchant not enabled for USD card	Clear failure from Fincra (account config), not silent

F. Swychr MoMo currencies (XAF, KES, XOF, UGX)

ID	Case	Expected
TU-SWY-01	Select KES/UGX/etc.	Mobile money top-up UI
TU-SWY-02	Complete payin	Wallet credited

6.4 Send money

Open `/send` . Live corridors by default: **NG, GH, ZM**.

ID	Case	Expected
SND-01	Send to Nigeria bank beneficiary	Account resolve (where available); fee/FX quote; success → tracking
SND-02	Send to Ghana MoMo	Network + phone; success
SND-03	Send to Zambia MoMo	MTN/Airtel/Zamtel; success
SND-04	Insufficient balance	Blocked with clear message
SND-05	Non-live corridor (e.g. KE) with <code>otherAfricanCorridors</code> false	Not offered as live / Coming Soon
SND-06	Paytota UGX payout toggle	Appears when <code>paytotaPayout</code> ; alternate rail works or fails gracefully
SND-07	Plaid bank funding	Link token opens when <code>plaid</code> ; secrets required
SND-08	Tracking page	Status progresses; failure reason if failed

Known blocker: Nomba upstream JWT expiry can break NGN transfer/conversion while bank lookup still works — document as environment defect, not app UI bug, if APIs return auth errors.

6.5 Receive money

ID	Case	Path / expected
RCV-01	In-network receive	Account number / <code>@efin_tag</code> shown
RCV-02	Virtual accounts	VA list for supported currencies (NGN, KES, GHS, ZAR, UGX, TZS, ZMW, RWF, USD as implemented)
RCV-03	Zambia MoMo payment links	Create fixed/flexible ZMW link when <code>elicate</code> ; pay with MoMo; wallet credit
RCV-04	Escrow payment links	<code>/payment-links</code> Coming Soon when <code>paymentLinks</code> false

6.6 Contacts / payees

Routes: `/contacts` , `/payees` . Modal: Add / Edit Payee.

Field / control	Required?	Notes
Category	Yes	person, supplier, employee, contractor, payee, other
Country	Yes	Drives payout defaults
Full name / business	Yes	
Nickname	Optional	
Email	Optional	
Phone	Optional (required if Mobile payout)	Always visible
Mailing address	Optional	Street, city, state/province, postal
Default payout	Optional	None / EFT ca / Interac / Mobile / Bank
Notes & tags	Optional	

ID	Case	Expected
CON-01	Create person with phone + mailing address	Saved; visible on edit
CON-02	Edit payee	All fields reload including tel & address
CON-03	Mobile payout without phone	Validation error
CON-04	Interac without email	Validation error
CON-05	EFT fields	Institution / transit / account validation
CON-06	Nigeria bank	Bank list + account name resolve
CON-07	Search contacts	Match name, nickname, phone
CON-08	Send from contact	Prefills send flow

6.7 Exchange (FX)

ID	Case	Expected
FX-01	Exchange NGN → USD (or supported pair)	Quote, fee, success; both wallets update
FX-02	Crypto tab	Hidden / Coming Soon when <code>crypto</code> false

6.8 Cards

ID	Case	Expected
CRD-01	<code>/cards</code> with <code>cards</code> true	Page loads
CRD-02	Swychr virtual card issue	Issue/ops when <code>swychr</code> ; needs funded provider wallet
CRD-03	Stripe card funding	Gated (<code>stripe</code> false)

6.9 Bills & airtime

ID	Case	Expected
BIL-01	/pay-bills	Categories (airtime, cable, utilities, etc.) via Flutterwave billers when enabled
BIL-02	Validate + pay bill	Success / clear failure
BIL-03	Canada bills	/pay-bills/canada
AIR-01	Swychr airtime panel	Catalog + recharge when swychr and not Canada-only context

6.10 Transfers history

ID	Case	Expected
HST-01	List transfers	Newest first; filters if any
HST-02	Open detail	Status, amounts, corridor, reference
HST-03	Failed transfer	Failure reason displayed

7. Admin & compliance testing (high level)

Prioritize by role:

Theme	Examples	Pass criteria
AuthZ	Non-admin cannot open /admin/*	Redirect / 403
KYC queue	Approve / reject with notes	User status updates; audit
Sumsub EDD	Launch from KYC review	Applicant created/status
User management	View user wallets / freeze if exists	Actions logged
API Management	/admin/api probes	Health results; PSP names OK here
AML modules	Sanctions, STR, monitoring	Forms save; permissions

8. Non-functional & cross-cutting

Area	Cases
Responsive	Desktop + mobile for Top-up, Send, Contacts, Dashboard
Session	Expiry / logout clears access
Deep links	Payment callback returns to correct wallet
Idempotency	Double-submit top-up/send does not double-credit
Webhooks	Manual replay / delayed webhook still credits once
Localization	Currency symbols & decimals correct (ZMW, NGN, CAD)
Accessibility	Labels on form fields; modal focus trap
Security	No secrets in client bundle; no PSP keys in Network response bodies

9. Suggested test suites (team split)

Suite A — Smoke (daily / release)

1. Login + dashboard
2. NGN Express card top-up (sandbox amount)
3. GHS MoMo top-up
4. ZMW MoMo top-up
5. NGN bank send (small amount)
6. Create/edit contact with phone + address
7. FX one pair
8. Confirm Coming Soon: Canada domestic, payment links, crypto

Suite B — CAD / Western top-up

1. CAD method picker labels
2. CAD via USD charge (Express + Card or bank)
3. Invoice path
4. Interac on/off by flag
5. Fincra USD merchant errors handled

Suite C — Zambia / Elicate

1. Top-up OTP
2. Send MoMo
3. Receive payment links
4. Webhook / reconcile credit

Suite D — Cards / bills / airtime

1. Cards page + Swychr issue
2. Bill validate/pay
3. Airtime catalog/recharge

Suite E — Regression / flags

1. Toggle `elicate` / `fincra` / `paytota` / `swychr` off → UI hides
2. `otherAfricanCorridors` on → KE/UG appear as send
3. White-label assertions across all top-up methods

Suite F — Admin / KYC

1. Persona happy path
 2. Admin approve/reject
 3. Role matrix
-

10. Known limitations & environment risks

1. `fincraInterac` default `false` — Interac CAD top-up not in default builds.
 2. `canadaDomestic` `false` — Canada Interac/EFT send Coming Soon.
 3. `paymentLinks` `false` — Escrow links gated; **ZMW Elicate receive links still live** when `elicate` `true`.
 4. **Fincra USD = card only** — no `bank_transfer` for USD charge currency.
 5. **CAD always charged as USD** for card/checkout rails that use Fincra/Nomba international path.
 6. **Fincra merchant config** — “Merchant not enabled to process USD card” is account-side, not card failure.
 7. **Localhost redirect** — Fincra return URL may point to production `VITE_APP_URL`.
 8. **Nomba JWT** — Upstream expired JWT can break payouts while lookups work.
 9. **Swychr cards** — Need funded admin/box wallet; sandbox vs prod via secrets.
 10. `docs/PRODUCT_RAILS.md` **may be stale** — prefer `productFeatures.ts` for what is live.
-

11. Data & evidence for bug reports

Please include:

- Environment URL + build/commit if known
- User ID / email (test account)
- Wallet currency & amount
- Corridor / beneficiary type
- User-facing method label selected
- Timestamp (UTC)

- Screenshots + Network failing request (status, response message)
 - Transfer / payment reference from UI
 - Feature flag assumptions
-

12. Glossary

Term	Meaning
Rail / PSP	Payment service provider powering a method
Corridor	Country/currency path for send
MoMo	Mobile money
VA	Virtual account number for receive
KYC / CDD / EDD	Identity & due diligence levels
White-label	Hide provider brand; show product method name
Edge Function	Supabase serverless API backing a rail

13. Document control

Prepared for	QA team test-case authoring
Related code	<code>src/lib/productFeatures.ts</code> , <code>src/lib/walletTopupGateway.ts</code> , <code>src/pages/TopUpPage.tsx</code> , <code>src/pages/SendPage.tsx</code> , <code>src/components/modals/AddBeneficiaryModal.tsx</code>
Related internal docs	<code>docs/PRODUCT_RAILS.md</code> , <code>docs/swychr/README.md</code>
Update trigger	Any change to feature-flag defaults or live corridors
